CONTENTS

7 ***Rolling focus*** **Present and future hot strip mill finishing train work rolls** P. Carless

11 ***Rolling focus*** **Development of forged steel roll metallurgy for hot strip mills** G. A. Ott

15 ***Rolling focus*** **Overview of work rolls for cold rolling** J. McCann

27 **Foaming during reduction of iron oxide in molten slag** A. K. Jouhari, R. K. Galgali, P. Datta, S. Bhattacharjee, R. C. Gupta, and H. S. Ray

32 **Theoretical concept on slag–oxygen sensors to measure oxide activities related to FeO, SiO_2, and CaO contents of steelmaking slags** E. T. Turkdogan

37 **Mould heat transfer and continuously cast billet quality with mould flux lubrication: Part 1 Mould heat transfer** C. A. M. Pinheiro, I. V. Samarasekera, J. K. Brimacombe, and B. N. Walker

55 **Influence of process variables on development of camber during hot rolling of strip steel** D. L. Biggs, S. J. Hardy, and K. J. Brown

63 **Development of model to predict condition monitoring interval times** K. B. Goode, B. J. Roylance, and J. Moore

69 **Influence of substrate topography on formation of FeZn phases and properties of galvanneal coatings** S. P. Carless, G. A. Jenkins, and V. Randle

91 ***Research focus*** **Contribution of ECSC Steel RTD programme to innovation** J. Ball

99 ***Research focus*** **Recent trends in research on slags** R. Boom *et al.*

111 **Influence of several factors on synthesis of iron carbide from iron ore** S. Hayashi and Y. Iguchi

117 **Behaviour of manganese oxides during magnetising reduction of Baharia iron ore by $CO–CO_2$ gas mixture** A. A. El-Geassy, M. I. Nasr, M. A. Yousef, M. H. Khedr, and M. Bahgat

123 **Flow induced stress distribution on wall of blast furnace hearth** A. K. Vats and S. K. Dash

129 **Kinetic model of desulphurisation by powder injection and blowing in RH refining of molten steel** J.-H. Wei, S. J. Zhu, and N.-W. Yu

138 **Effect of interphase lift force on fluid flow in air stirred cylindrical vessel** L. Zhang, K. Cai, Y. Qu, and Y. Shen

144 **Mould heat transfer and continuously cast billet quality with mould flux lubrication: Part 2 Quality issues** C. A. M. Pinheiro, I. V. Samarasekera, J. K. Brimacombe, B. Howes, and O. Gussias

183 **Applications for plasma transferred arc welded tools during hot steel tube making** M. Akiyama, K. Tsubouchi, T. Okuyama, and N. Sakaguchi

189 **Improvement in internal quality of boiler plates at Bhilai Steel Plant** A. K. Ray, P. K. Bhor, D. S. Basu, S. K. Sahay, A. Paul, N. Pradhan, C. S. Tiwary, S. Das, A. Bandyopadhyay, and N. P. Bohidar

194 **Morphology and reduction kinetics of fluxed iron ore pellets** S. Prakash, M. C. Goswami, A. K. S. Mahapatra, K. C. Ghosh, S. K. Das, A. N. Sinha, K. K. Singh, and K. K. Mishra

202 **Kinetics of solid state silica fluxed reduction of chromite with coal** H. V. Duong and R. F. Johnston

207 **Pattern recognition and classification of blast furnace wall temperatures** H. Saxén, L. Lassus, M. Seppänen, and T. Karjalahti

212 **Estimation of liquidus temperatures for steel using thermodynamic approach** J. Miettinen and A. A. Howe

228 **Degradation mechanisms of magnesia–chromite refractories in vacuum–oxygen decarburisation ladles during production of stainless steel** P. T. Jones, B. Blanpain, P. Wollants, R. Ding, and B. Hallemans

238 **Break temperatures of mould fluxes and their relevance to continuous casting** S. Sridhar, K. C. Mills, O. D. C. Afrange, H. P. Lörz, and R. Carli

243 **Optimisation of continuous casting mould parameters using genetic algorithms and other allied techniques** N. Chakraborti and A. Mukherjee

273 **Control of greenhouse gas emissions from electric arc furnace steelmaking: evaluation methodology with case studies** M. J. Thomson, E. J. Evenson, M. J. Kempe, and H. D. Goodfellow

280 **Silicon distribution between blast furnace slag and hot metal** M. Meraikib

286 **Optimisation of ladle slag composition by application of sulphide capacity model** M. A. T. Andersson, P. G. Jönsson, and M. Hallberg

294 **Design and calculation of gas property parameters for constant area lance under conditions of friction flow with heating** J.-H. Wei, S.-H. Xiang, Y.-Y. Fan, N.-W. Yu, J.-C. Ma, and S.-L. Yang

302 **Modelling criteria for flow simulation in gas stirred ladles: experimental study** D. Mazumdar, H. B. Kim, and R. I. L. Guthrie

310 **Development of laboratory scale thin strip caster and investigation of direct casting of AISI 304 stainless steel** M. Ghosh, N. Sen, A. Paul, A. K. Ray, R. Sau, and S. Chakraborty

317 **Twin roll strip casting of low carbon steels** A. Girgensohn, A. R. Büchner, and K.-H. Tacke

324 ***Short communication*** **Gloom or boom? Steel demand forecasting revisited** M. Evans and R. H. Rees

332 ***SMEA Conference Opening Address*** **Future developments in continuous casting technology** M. M. Wolf

343 **Influence of nitrogen on hot ductility of steels and its relationship to problem of transverse cracking** B. Mintz

348 **Influence of post-combustion heat transfer efficiency on fuel reduction in COREX process** S. C. Koria and M. K. Barui

355 **Maximum inclusion size in two clean steels: Part 1 Comparison of maximum size estimates by statistics of extremes and general Pareto distribution methods** G. Shi, H. V. Atkinson, C. M. Sellars, and C. W. Anderson

361 **Maximum inclusion size in two clean steels: Part 2 Use of data from cold crucible remelted samples and polished optical cross-sections** G. Shi, H. V. Atkinson, C. M. Sellars, and C. W. Anderson

367 **Slag–graphite.wettability and reaction kinetics: Part 1 Kinetics and mechanism of molten FeO reduction reaction** N. Siddiqi, B. Bhoi, R. K. Paramguru, V. Sahajwalla, and O. Ostrovski

373 **Influence of calcium carbide slag additions on inclusion characteristics in steel** T. Sjöqvist, S. Jung, P. Jönsson, and M. Andreasson

381 **Heavy plate production: demand on hydrogen control** H. Lachmund, V. Schwinn, and H. A. Jungblut

387 **Effect of alumina pickup on mould flux viscosity in continuous slab casting** G. A. Bezuidenhout and P. C. Pistorius

392 ***Technical note*** **Development of forging quality high strength low alloy steels** K. Chakraborty, A. K. Chakrabarti, and A. B. Chattopadhyay

421 **Cold bonded ore–coal composite pellets for sponge ironmaking: Part 1 Laboratory scale development** B. B. Agrawal, K. K. Prasad, S. B. Sarkar, and H. S. Ray

426 **Behaviour of coal in smelting reduction installation** A. B. Usachev, A. V. Balasanov, V. E. Lekherzak, and V. A. Romenets

432 **Influences of scaffold and coal injection on gas and liquid flow distributions in blast furnace: experimental study** X. Bi, S. Fu, X. Cheng, G. Zhou, S. Lu, J. Cheng, Y. Xia, and X. Gu

437 **Slag–graphite wettability and reaction kinetics: Part 2 Wettability influenced by reduction kinetics** N. Siddiqi, B. Bhoi, R. K. Paramguru, V. Sahajwalla, and O. Ostrovski

442 **Minimisation of calcium additions to low carbon steel grades** J. M. A. Geldenhuis and P. C. Pistorius

450 **How fast can we cast?** C. Bernhard, H. Hiebler, and M. M. Wolf

455 **Self-thermostatting organically coated steel cladding using thermochromic materials** L. Lesniewski and D. A. Worsley

461 **Forming evaluation of complex tube hydroformed components** R. A. Darlington, M. J. Godwin, and J. D. Parker
